LocalWorks Capstone Defense

Simplified Transcription & List of Required Revisions

1. Capstone Defense Transcription

[00:00 - 01:27] Monetization & Financial Feasibility

- **Panelist:** ...anticipate as if it is you as the student developer. You will anticipate it as you, IT practitioner, working as developer company... So that's how you will monetize, that's how you will calculate and compute for your possible revenue, your possible expenses... It's because the one that you did is an actual pitch that you will do whenever you need investors for the project... Kaya nga it is also included in your rubrics that you need to show your monetization sections. Now, so 10,000, is it enough? We don't think so.
- **Panelist 2:** Wala kayong initial costing, so 'di niyo din alam kung kailan ninyo mare-reach 'yung break-even.
- **Panelist:** Kaya nga. 'Di niyo alam kung kailan mababawi 'yung capital... Kung ako ay investor and I will finance that system, gaano katagal bago ko mabawi 'yung capital na i-invest ko sa inyo? Malulugi ba ako?

[01:28 - 02:19] Agenda

- **Panelist:** Did you even look at the rubrics? System kaagad? Hindi pa pwedeng mag-intro muna?
- **Presenter 1:** Good day, Sir, Ma'am. So we are presenting about our capstone project called LocalWorks. Here are our agendas for today: First, Chapter 1 Introduction; Next, Chapter 2 Methodology; Next, Chapter 3 Discussion and Findings; Chapter 4 Conclusion and Recommendation; Next, Capstone 1 Revisions; And lastly, System Walkthrough.

[02:20 - 03:19] Terminology & Usability vs. Acceptability

- **Presenter 1:** Informal workers face limited opportunities and unstable income...
- **Panelist:** When you say informal workers, you're referring to what? Blue and white-collar jobs will be the great distinction... If you use 'informal workers,' replace it with blue or white-collar job workers.
- **Presenter 1:** Lastly, what is the acceptability level of LocalWorks...
- **Panelist:** Does it really have to be acceptability, or usability? When we deal with the system, make transactions over it, it's usability. Is it usable enough for job hunters or job seekers?

[03:20 - 05:00] Objectives, Target Location, and Sampling

- **Presenter 1:** Objectives of the Study... Scope and Delimitation...
- **Panelist:** What municipality? Where do you intend to pilot the implementation? Where did your data come from? Saan kayo nag-survey?
- **Presenter 1:** Mostly po sa mga relatives po namin...
- **Panelist:** Conflict of interest! Who is the target beneficiary? Is it the people of Dagupan City, Mangaldan, or Santa Barbara?
- **Presenter 1:** Specifically, Dagupan City po.

[05:00 - 07:30] Delimitations & Software Methodology

- **Panelist:** When we say basic analytics, we are not limited to charts and graphs only. There should be something derived out of the collected data.
- **Presenter 1:** Software development methodology: Waterfall methodology...
- **Panelist 2:** Since you have no clients, it is not recommended to use Waterfall because you need to constantly evaluate based on feedback.

- **Panelist 1:** Change it to the most appropriate methodology, not Waterfall. Use Agile Scrum, which is better.

[07:30 - 10:14] System Architecture & Respondent Population

- **Panelist:** Where is the AI integration included in the architecture?
- **Presenter 1:** At the backend, specifically the Business Layer, Sir.
- **Panelist:** How many respondents do you have?
- **Presenter 1:** 60.
- **Panelist:** You must identify the total number of job seekers in Dagupan, then get a sample population. 60 respondents is less than 1%, which is not logical.
- **Presenter 1:** We will try for 100, and if possible get to thousands.

[10:15 - End] System Demo & UI Feedback

- **Panelist:** Let your user know where/which navigation item they are currently in.
- **Panelist:** Why is there a need for the Admin to approve every worker registration or job post? That part should be handled by AI verification (credentials/DTI/business permits) and email verification.
- **Panelist:** What is the AI used for?
- **Presenter 1:** Skill matching / job recommendations.
- **Panelist:** You should also use AI for initial verification/credibility scoring of uploaded credentials.

2. List of Required Revisions

1. Document & Terminology Revisions

- **Job Classification:** Change terminology from 'informal/barangay-level workers' to **blue-collar** and **white-collar** job workers.
- **Evaluation Metric:** Change **Acceptability** to **Usability** throughout the document and questionnaires.
- **Methodology:** Change development methodology from **Waterfall** to **Agile Scrum**.
- **Target Locale:** Specify **Dagupan City** (e.g., Poblacion and Arellano) as the exact pilot implementation location.
- **Sampling Size:** Obtain official public data for job seeker population in Dagupan City and scale respondents from 60 to **hundreds/thousands**.
- **Financial Feasibility:** Add initial costing, revenue streams, operational expense projections, break-even analysis, and ROI timeline.

2. AI & System Architecture

- **AI Feature Expansion:** Expand AI usage from job matching to include **automated document/credential verification** and credibility scoring.
- **Architecture Diagram:** Map security features and AI logic strictly within the **Business Layer** (Back-End) connected to MongoDB.

3. Workflow & Admin Functions

- **Automate User Registration:** Remove manual admin approval for every worker registration. Use email verification and AI credential scoring instead.
- **Admin Dashboard:** Shift admin view focus to high-level statistical analytics (e.g., job postings by sector).
- **Account Cleanup:** Add automated deactivation for accounts that are inactive for 6+ months.

4. UI/UX & Form Controls

- **Navigation Indicator:** Add active tab highlighting and fix hover states on menu items.
- **Form Inputs:** Convert **Job Category** to a dropdown menu; add pay frequency options (Daily, Weekly, Monthly) for **Salary**; disable past dates dynamically on calendar pickers.
- **Map Display:** Reformat layout around the embedded map to remove excess white space.

5. Reporting & Demo Prep

- **Report Exports:** Add direct **Printable PDF Export** support for system reports alongside CSV/Excel.
- **System Seeding:** Seed the system with complete mock data for the revision re-defense.
